

PEAK
DENTAL STUDIO

Smile Source Price Book

Updated Feb 2026

Welcome

At Peak Dental Studio, **our purpose is simple:** help you deliver beautiful, predictable dentistry with less friction and more follow-through. We do that through exacting **craftsmanship, transparent communication, and thoughtful logistics** that respect your chair time and your patients' trust.

This guide introduces how we work, what makes us different, and how to get started in minutes.

Why Peak

At Peak Dental Studio, we believe dentists shouldn't have to choose between affordability, quality, or trust.

Our model blends U.S. oversight with global craftsmanship. Yes, our restorations are manufactured offshore, but under the same ISO-certified standards used by the most advanced labs worldwide. This isn't outsourcing to cut corners. It is a deliberate partnership that allows us to deliver world-class prosthetics at a fraction of the cost.

Every case is routed through our U.S. operations, where Japanese-trained master technicians verify fit, esthetics, and occlusion before a restoration ever leaves our hands. You gain:

Consistency

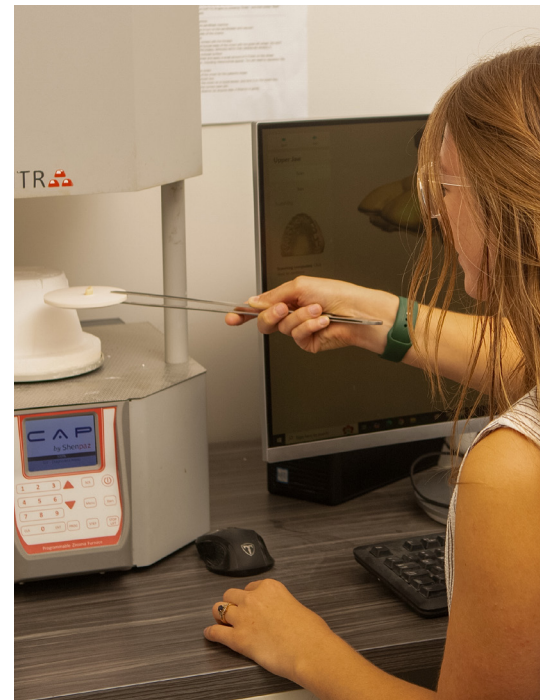

Digital workflows capture your preferences and repeat them, case after case.

Value

30–40% savings without compromising clinical results.

Accountability

U.S.-based communication and QC ensure your patients never see the difference, except in comfort and beauty.

The result is simple; restorations that look natural, seat smoothly, and save you both time and margin. Offshore scale, onshore reliability, built for doctors who demand both.

Practice Impact

Unlimited wax try-ins for removables

We build confidence before processing, so patients and doctors are aligned on esthetics, phonetics, and function. Note: shade changes requested after an approved wax try-in will incur a lab fee.

Lifetime warranty remakes

If something misses the mark, we make it right for the life of the restoration. Return the original case components and we'll remake at no charge.

Free 2nd day shipping both ways

We provide UPS labels so logistics never slow your schedule. Automated tracking updates are not available; for status, please call or email our team.

PEAK
Signature
COLLECTION

The Signature Standard

There are things you make. And then there is the work you sign.

For more than three decades, the technicians behind this collection have upheld a different standard. A standard shaped long before software or automation. A standard born from lineage. From mentors. From repetition. From the quiet pride of people willing to put their name spoken or unspoken on the work.

The Signature Collection is not a SKU. It is not a tier. It is not a marketing device. It is a promise.

A promise that every restoration is shaped with intention, refined with discipline, and finished with accountability. A promise that modern systems do not replace the human hand; they amplify it. A promise that growth does not dilute craft; it protects it.

This is work that carries a signature because it earns one. This is restoration at its apex, where precision meets artistry, and every millimeter matters. When you choose Signature, you're selecting more than a restoration. You're choosing a legacy of excellence that your patients will see and feel with every smile.

The Craft Behind Signature

Every Signature case moves through an elevated workflow that blends discipline with intuition. This is not mass production. It is controlled creation, where modern precision tools serve traditional purposes and human expertise guides every decision.

01

Master Technicians Only

Decades of restorative experience guide every contour, layer, and line angle. Each technician brings institutional knowledge passed through generations of mentorship.

02

Human First Esthetic Design

Texture, anatomy, and microcharacterization shaped by a trained eye rather than a template. Natural beauty cannot be automated; it must be understood.

03

Lineage Based Standards

Methods passed from mentor to apprentice ensure integrity remains constant across decades. This continuity protects quality as the lab grows.

04

Modern Tools, Traditional Purposes

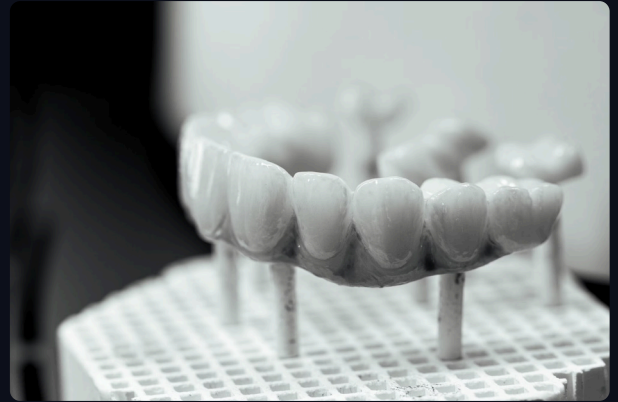

CAD/CAM accelerates precision, not shortcuts. Technology amplifies the craftsman's hand without replacing the craftsman's judgment.

- **The Signature Difference:** Where others optimize for speed, we optimize for permanence. Where others standardize, we individualize. Where others automate decisions, we amplify human expertise.

When to Choose Signature

Signature is the right choice when the case sits in the esthetic zone, when patient expectations are high, when a redo would undermine trust. This is the work you choose when the patient will notice the difference, consciously or not.

Ideal Case Types

- Anterior restorations in the smile line
- Veneer cases requiring precise shade matching and harmony
- Multiunit cosmetic reconstructions
- High visibility implant crowns
- Cases where symmetry and translucency are critical
- Discerning patients with elevated esthetic expectations
- Photographed outcomes for marketing or case presentations

📌 **Clinical Insight:** Signature becomes more valuable the more visible the restoration. When light, symmetry, and patient scrutiny converge, standard processes cannot deliver what handcrafted precision can.

 **smile source**
Partner Perks

As an official Smile Source partner, you'll receive:

Discounted pricing on a broad range of fixed and removable restorations.

Quarterly 7% rebates* based on qualifying lab spend.

*Rebate does not apply to the following products: shipping charges, analogs, 3D-printed models, metal weight fees, abutments, implant labor fees, OEM implant parts, rush fees, and design consults. Credit memos and other marketing credit incentives will be considered when calculating rebates.

What Our Doctors Say

Best lab around! I have been working with the team at Peak Dental Studio for over 7 years now. Their crowns are consistently perfect. I rarely ever need to adjust anything on the seat appointment.

Dr. David Blackhurst

I have been sending my fixed and removable cases to Peak for the past several years and have been very satisfied with the quality and customer service. I have never had to send anything back to them to be redone, and they implement my feedback in a timely manner regarding adjustments I have requested. Highly recommend!

Dr. Lorraine Bautista

I have been using PEAK dental lab for a couple years now and absolutely love them! I am with a group of 6 dentists over 4 practices and we all agree that the crowns fit better than any other lab we have used. Doing mostly zirconia crowns. Love the fit and the price!

Dr. Trevor Peterson

Getting Started

1

Set up your account

Fill out the New Account Set-Up Form with your office details, doctor preferences, and contacts. Prefer to have us do it? Just call or email and we'll take care of everything.

2

Connect your scanner or request shipping materials

Use the **Scanner ID Document** in our "Welcome Packet" or on our Smile Source page to connect your scanner. Need to send a physical case? Contact us at support@peakdentalstudio.com or call (801) 850-8758 for **free UPS shipping labels and materials**.

3

Send your first case

We'll confirm receipt, review the Rx and files, and communicate any questions the same day.

Need help fast?

Support: (801) 850-8758

Email: support@peakdentalstudio.com

Connect Your Scanner

Simply search for "**PEAK DENTAL STUDIO**" or **technicians@peakdentalstudio.com** and get connected!

Reference Address:
1064 S N County Blvd #430
Pleasant Grove, UT 84062

We accept files from, including but not limited to:

Ori

Medit

Itero (ID:22376)

3Shape / Trios

DS Core / Sirona Connect

Dexis / Carestream

HeronCloud

Shining 3D

Ex: iTero Lab ID: 22376

Having trouble connecting? Use a scanner not listed above?

Call (801) 850-8758 or email our digital department at technicians@peakdentalstudio.com and a member of our team would be happy to assist!

Need to send a physical case? Contact us at support@peakdentalstudio.com or **Call (801) 850-8758** for free UPS shipping labels and materials.

Submitting Cases

Digital

Attach calibrated photos (retracted full-face and close-up), stump shade if relevant, and clear prep reduction notes. Confirm margin visibility before sending.

Analog

Use our Rx form included in your starter kit. Note material, shade system/tab, pontic design, desired contacts/occlusion, and any implant components (system and size). Place models, bites, and impressions in separate bags within a crush-resistant box. Affix our prepaid UPS label and schedule pickup.

Turnaround & Warranties

- Standard fixed and removable: approximately two weeks in lab.
- Retainers: approximately two weeks in lab.
- Warranties: Lifetime remake coverage when the original case is returned; see your price sheet and account agreement for covered products and exclusions.

For rushes, call first — we'll advise feasible ship dates before you schedule.

Practical Tips for Faster Seats

- Provide opposing, bite, and clear margin photos for every crown.
- For esthetics, include shade photos with a tab at the same focal plane as the tooth.
- For implants, specify system, platform size, and desired retention (screw vs cement). Include torque specs and any OEM components.
- For complete dentures, use unlimited wax try-ins to finalize esthetics and occlusion before processing.
- Document preferences (contacts, occlusion, embrasures) once; we'll apply them to future cases.
